TROPICAL CYCLONE BULLETIN NO. 10 Typhoon "KIKO" (CHANTHU)

Issued at 2:00 AM, 10 September 2021

Valid for broadcast until the next bulletin at 5:00 AM today.

"KIKO" CONTINUES TO MOVE WEST NORTHWESTWARDS TOWARDS EXTREME NORTHERN LUZON.

Location of Center (1:00 AM)

The center of the eye of Typhoon "KIKO" was located based on all available data including those from Daet Doppler Weather Radar at 320 km East of Casiguran, Aurora (16.5°N, 125.1°E)

Intensity

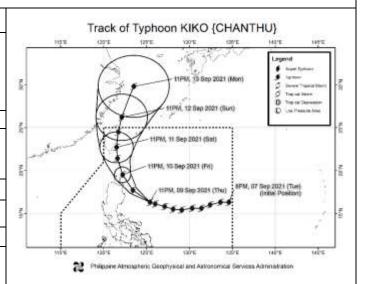

Maximum sustained winds of 195 km/h near the center, gustiness of up to 240 km/h, and central pressure of 930 hPa

Present Movement

West Northwestward at 25 km/h

Extent of Tropical Cyclone Winds

Strong winds or higher extend outwards up to 230 km from the center

TRACK AND INTENSITY FORECAST

	Center Position			Intensity		Movement
Date and Time	Lat. (°N)	Lon. (°E)	Location	MSW (km/h)	Cat.	dir. and speed (km/h)
12-Hour Forecast 11:00 AM 10 September 2021	17.7	123.4	180 km East of Tuguegarao City, Cagayan	195	TY	NW 20
24-Hour Forecast 11:00 PM 10 September 2021	19.5	122.2	Over the coastal waters of Calayan, Cagayan	185	TY	NNW 20
36-Hour Forecast 11:00 AM 11 September 2021	21.4	121.6	70 km North Northwest of Itbayat, Batanes	185	TY	NNW 20
48-Hour Forecast 11:00 PM 11 September 2021	22.7	121.5	215 km North of Itbayat, Batanes	185	TY	N 10
60-Hour Forecast 11:00 AM 12 September 2021	24.5	121.7	In the vicinity of Yilan County, Taiwan or 410 km North of Itbayat, Batanes	175	TY	N 15
72-Hour Forecast 11:00 PM 12 September 2021	26.2	122.1	600 km North of Itbayat, Batanes (outside the PAR)	155	TY	NNE 15
96-Hour Forecast 11:00 PM 13 September 2021	29.8	123.5	1,015 km North of Extreme Northern Luzon (outside the PAR)	150	TY	NNE 20

TROPICAL CYCLONE BULLETIN NO. 10 Typhoon "KIKO" (CHANTHU)

Issued at 2:00 AM, 10 September 2021 Valid for broadcast until the next bulletin at 5:00 AM today.

HAZARDS AFFECTING LAND AREAS

Heavy Rainfall

- This through tomorrow evening, heavy to intense with at times torrential rains due to the typhoon may be experienced over Cagayan including Babuyan Islands, Batanes, and northern Isabela. Moderate to heavy with at times intense rains may be experienced over Ilocos Region, Cordillera Administrative Region, northern and central Aurora, and the rest of Cagayan Valley. Under these conditions, scattered to widespread flooding (including flash floods) and rain-induced landslides are possible especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps.
- Severe Tropical Storm "JOLINA" and Typhoon "KIKO" will continue to enhance the Southwest Monsoon, bringing rains over the
 western sections of Southern Luzon and Visayas in the next 24 hours. For more information, see Weather Advisory #3 for Southwest
 Monsoon issued at 11:00 PM today.

Severe Winds

- Winds reaching gale to storm force in strength will be experienced within any of the areas where Tropical Cyclone Wind Signal #2 is in effect during the passage of the typhoon. This may result to light to moderate damage to structures and vegetation.
- Winds reaching strong breeze to near gale in strength (i.e., strong winds) will be felt within any of the areas where Tropical Cyclone Wind Signal (TCWS) #1 is in effect. This may result to up to very light damage to structures and vegetation.
- It must be noted that as the typhoon progresses towards Extreme Northern Luzon, higher wind signals will be hoisted in some localities within Northern Luzon. Based on the latest track and intensity forecast, TCWS #4 remains the highest wind signal that will be hoisted for this typhoon.
- Severe Tropical Storm "JOLINA" and Typhoon "KIKO" will continue to enhance the Southwest Monsoon, bringing rains over the
 western sections of Southern Luzon and Visayas in the next 24 hours. For more information, see Weather Advisory #3 for Southwest
 Monsoon issued at 11:00 PM today.

Coastal Inundation

A moderate risk of storm surge reaching 1.0 to 2.0 m in height may occur in the next 48 hours. Rising sea water along with the high waves from the shore line moving inland may cause flooding in the low-lying coastal localities of Batanes, Cagayan including Babuyan Islands, and Isabela.

HAZARDS AFFECTING COASTAL WATERS

- In the next 24 hours, rough to very high seas (2.5 to 10.0 m) will be experienced over the seaboards of areas where TCWS is in effect. Sea travel is risky for all types of sea vessels. Mariners are advised to remain in port or take shelter in port until winds and waves subside.
- Moderate to rough seas (1.2 to 3.0 m) will be experienced over the eastern seaboards of Central and Southern Luzon. Sea travel
 is risky for those using small seacrafts. Mariners are advised to take precautionary measures when venturing out to sea and, if
 possible, avoid navigating in these conditions.

TRACK AND INTENSITY OUTLOOK

- Typhoon "KIKO" is forecast to move generally northwestward or north northwestward towards the Babuyan Islands-Batanes area. On the forecast track, the typhoon is forecast to pass very close to northeastern Cagayan this afternoon or evening. Afterwards, the typhoon may cross the vicinity of Babuyan Islands and Batanes or pass within their coastal waters tonight through tomorrow morning or afternoon. Considering the generally west northwestward movement of the typhoon over the past 12 hours, the possibility of landfall over the northeastern portion of Cagayan is not yet ruled out. As such, the public is advised to continue monitoring for possible changes in the track forecast in the succeeding bulletins.
- After passing in the vicinity of Extreme Northern Luzon, "KIKO" is forecast to move northward for the remainder of tomorrow through Sunday noon and may make landfall in the vicinity of eastern Taiwan or pass within its coastal waters. The typhoon is forecast to exit the Philippine Area of Responsibility on Sunday afternoon or evening. Outside the PAR, the typhoon will turn north northeastward over the East China Sea.
- Typhoon "KIKO" is forecast to slightly weaken to around 185 km/h within the next 12 hours and maintain that intensity as it moves over Extreme Northern Luzon. Further weakening will begin on Sunday as the typhoon grazes or makes landfall in Taiwan and interacts with its rugged terrain. Nevertheless, "KIKO" will remain a very strong typhoon throughout its passage of Extreme Northern Luzon and will remain within typhoon category throughout the forecast period.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.

The next tropical cyclone bulletin will be issued at 5:00 AM today.
